Éva Mikics

Re-wiring the brain

The ability for the brain to adapt to our experience by re-wiring itself is arguably its most fundamental characteristics. Besides its obvious benefits, such as for learning and memory, this can also have downsides, such as following childhood social adversities. In her talk, neuroscientist Éva Mikics will discuss the latest understanding of how the brain re-wires itself during experience, and how this remarkable property might provide a new approach to therapy.
